P10+U5+PixelFlow

Change Working Mode

The P10 can work in switcher mode or PGM only mode. Users can switch between the two modes as required.

- 1 Select **Device** on the left of PixelFlow homepage.
- 2 On the right of the page that appears, set **Working Mode** to **Switcher** or **PGM Only**.

Configure Screens

The P10 supports one common screen and two AUX screens. Users can set the connector layout, add and replace connectors for the common screen. The relationships between AUX screens and AUX outputs are fixed.

- 1 Select **Screen** on the left of PixelFlow homepage. The common screen is selected by default.
- 2 At the top of the editing area, tap a layout template icon or customize a layout by specifying the number of rows and columns.
- 3 Drag an output to the canvas to complete screen configuration. To change the output, drag another output to the target area.
- 4 On the right of the page, set screen properties as required.

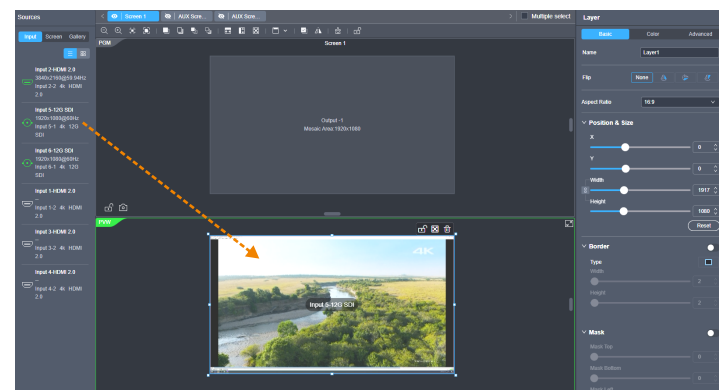

Add Layers

The PGM output of the P10 supports up to 6 layers including 2x 4K@60Hz layers and 4x 2K@60Hz layers, or 3x 4K@60Hz layers.

Each AUX screen supports only one layer that fills the screen and cannot be resized and repositioned. The AUX screens can be used as teleprompters.

- 1 Select **Programming** on the left of PixelFlow homepage.
- 2 Tap a screen name to select the screen, or select **Multiple select** and tap to select multiple screens.
- 3 Add layers to the screen.
 - Common screen: Drag an input source to the screen to add a layer.
 - AUX screen: Drag an input source or PGM to the screen to add a layer.

Switch from PVW to PGM

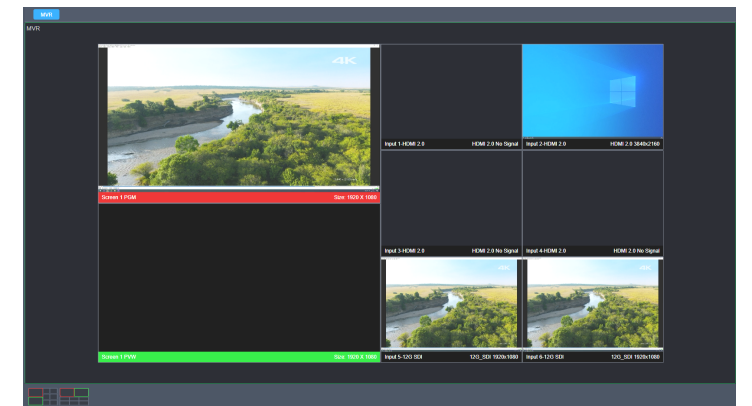

- Swap: When this option is selected, the contents on the PVW screen and PGM screen are swapped after the switching. When this option is not selected, the content on the PVW screen is copied to the PGM screen after the switching.
- Cut: Switch the content on the PVW screen to the PGM screen with no transition effect.
- Take: Switch the content on the PVW screen to the PGM screen with a specified transition effect. The effect duration can be specified.
- T-Bar: Switch the content on the PVW screen to the PGM screen with a specified transition effect. Users can control the transition duration by dragging the virtual T-Bar.

Set Multiviewer

The P10 supports live monitoring of all the input sources, PVW and PGM screens. Users can choose any of the provided Multiviewer layout templates. The layout cannot be customized.

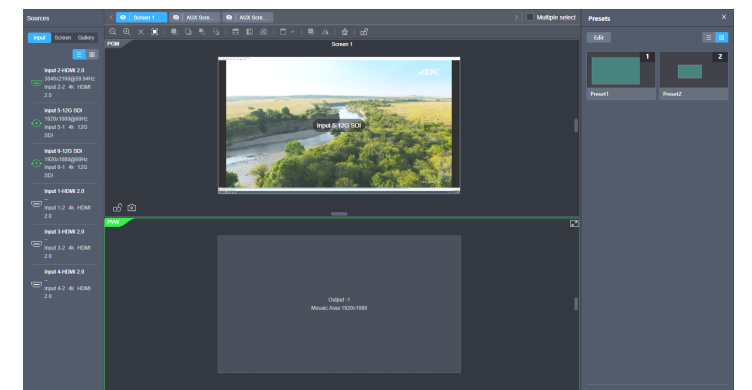

- 1 Select **Multiviewer** on the left of PixelFlow homepage.
- 2 Select a layout template from the bottom of the page.

Switch Between Presets

Up to 128 presets can be saved by the P10. A preset includes screen and layer information. Presets can be quickly loaded.

- 1 Select **Presets** on the left of PixelFlow homepage.
- 2 On the right of the page, tap a preset on the preset list to load it.
 - Switcher mode: The preset is loaded to the PVW screen. Go to step 3.
 - PGM only mode: The preset is loaded to the PGM screen and no further action is required.
- 3 Tap **Cut** or **Take**, or tap **T-Bar** and drag the virtual T-Bar to switch content from the PVW screen to PGM screen.

* The software pictures given in this guide are used for illustration purposes only. The actual user interface may vary slightly due to product enhancement. The content of the pictures can be slightly different from reality, such as the form and position of software windows, input source images and more.
